

Platinum
Black is beautiful

Harder than the rest!!

Up to the next level
with our Platinum

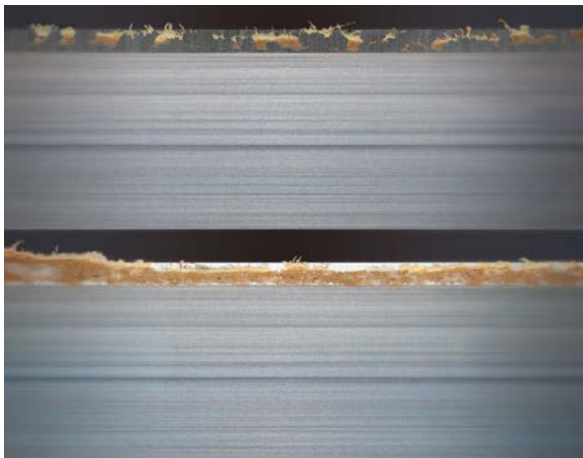

Platinum steel rule: bevel coated, edge hardened, micro-fine ground rule with the accurate height tolerance of a shaved cutting rule.

With a hardness of 4000-5000 HV, the Platinum is five times harder than an ordinary edge hardened rule with the same bendability. (without influencing the flexibility - weg)
It cuts tougher materials with less pressure and less extrusion. This leads to less dust and excellent die cutting results with increased lifetime.

Advantages

- 5 x harder edge
- excellent bendability
- extremely increased lifetime
- less cutting pressure

Technical specifications

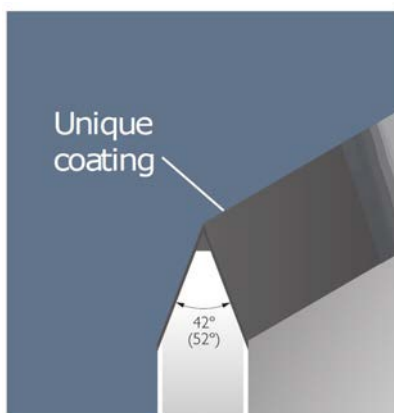

- bevel angles: 42° or 52° angle
- edge hardness: 4000–5000 HV
- unique platinum coated edge

Platinum

◀ Minimal build-up of adhesive and fibres on the cutting edge

Standard

◀ High build-up of adhesive and fibres on the cutting edge
